Iron Content of Foods

- Eating more than the serving size for a moderate or low-iron food will make it a high-iron food. Foods made with high-iron foods will also be high in iron.
- Unless otherwise noted, all foods are cooked: meat is roasted, fish is cooked with dry heat, and vegetables are cooked from fresh. Fruit is raw.
- This is a guide. Actual values may vary depending on the product and/or processing. Vegetables and/or beans that are frozen or canned may have higher iron values. Iron-fortified foods may vary widely in the amount of iron they have.
- Values are rounded to the closest 0.1-milligram (mg) increment and may be averaged with similar foods in the same group.
